

TEC-FROST

TEC-FROST Heat Transfer Fluid. Technical Grade Propylene Glycol-Based Heat Transfer Fluid

Overview

TEC-FROST Heat Transfer Fluid contains an inhibitor package that helps prevent corrosion of metals, minimizes scaling and fouling of heat transfer surfaces, and buffers the pH to maintain it in the optimum operating range. The inhibitor system is based on a balanced high phosphate formulation. In terms of functionality and performance, **TEC-FROST Heat Transfer Fluid** is equivalent to the very best national brands on the market, including Dowfrost*, Ucarfreeze* and Jeffcool* P-200.

Applications

- HVAC system freeze/burst/corrosion protection
- Process cooling/heating
- Solar heating
- Refrigeration warehouse floor heating
- Thermal energy storage
- Ice skating rinks
- Sidewalk and playing field subsurface heating
- Cold room dehumidify
- Computer cooling systems
- Cosmetic or pharmaceutical buildings

Operating Temperature Range and Freeze/Burst Protection

TEC-FROST Heat Transfer Fluid has a recommended operating temperature range of -50°F to +325°F. The lowest temperature to which **TEC-FROST Heat Transfer Fluid** can be exposed depends upon the amount of water with which the concentrated product is mixed. **TEC-FROST Heat Transfer Fluid** can be used to provide both freezing protection and burst protection for systems which may be exposed to very low temperatures. The freezing point is the temperature at which ice crystals first begin to appear in the **TEC-FROST Heat Transfer Fluid**. As the temperature continues to fall below this point, an ice/glycol slush forms until the temperature at which the solution freezes solid is reached. The latter is the burst point, or the point at which the expanded, frozen **TEC-FROST Heat Transfer Fluid** can cause piping, pumps, etc. to crack or rupture.

Product Features

- Inhibitor system is phosphate-based
- Functional equivalent to Dowfrost, Ucarfreeze and Jeffcool P-200 and can be mixed with these products with no adverse effects.
- Operating range of -50°F to +325°F
- Unique additive package:
- Controls corrosion of metals
- Helps prevent scaling and fouling of heat transfer surfaces
- Buffers the pH to maintain it in the optimum operating range

Corrosion Protection

TEC-FROST Heat Transfer Fluid provides outstanding corrosion protection for copper, brass, solder, steel, and cast iron and aluminum. It meets or exceeds ASTM D 1384, the standard industry corrosion test for these metals. It is also completely compatible with most plastics, elastomers and types of rubber.

*Dowfrost and Ucarfreeze are trademarks of the Dow Chemical Co.; Jeffcool is a trademark of Hunstman Corp.

Water Quality Requirements

Water used to dilute **TEC-FROST Heat Transfer Fluid** can be low-hardness, city water or well water, although the use of deionized water or distilled water is best. It is recommended that water with no more than 350 ppm hardness be used to dilute **TEC-FROST Heat Transfer Fluid** concentrate or be used as make-up water.

Typical Properties						
Physical Property	Temp (°F)	15% Glycol Solution	30% Glycol Solution	40% Glycol Solution	50% Glycol Solution	60% Glycol Solution
Thermal Conductivity [BTU/(hr ft ³) (F°/ft)]	40	0.282	0.253	0.231	0.211	0.190
	180	.0327	0.285	0.255	0.228	0.199
	325	0.321	0.284	0.254	0.217	0.189
Specific Heat [(BTU/(lb °F)]	40	0.955	0.915	0.855	0.802	0.740
	180	0.989	0.967	0.924	0.886	0.839
